

Remote SecureSphere Health Checks

The quickest and most efficient way to maximize your SecureSphere investment

Imperva's Health Checks for SecureSphere Web Application Security and Database Security solutions provide system analysis and configuration tuning of your SecureSphere deployment. The remote Health Check program ensures that your deployment is efficient and reliable – and that you are maximizing your investment.

SecureSphere Web Application Firewall Health Checks

Imperva's Health Checks for SecureSphere Web Application Firewall (WAF) provide special profile tuning and security policy customization that address the unique needs of the environment. Health Checks ensure that your SecureSphere deployment is tailored to the environment and help you maximize your SecureSphere investment. The engagement includes assessment and tuning of SecureSphere WAF profiles, policies and alerts for up to 5 web applications as well as documentation of the modifications made to your SecureSphere WAF deployment.

SecureSphere Database Activity Monitoring and Database Firewall Health Checks

Imperva's Health Checks for SecureSphere Database Activity Monitoring (DAM) and Database Firewall (DBF) enable rapid tuning of your SecureSphere deployment. The SecureSphere Health Check program includes a remote assessment of the security and audit policies, profiles and alerts followed by custom tuning that addresses your unique requirements and business needs. Proper utilization of advanced monitoring and security capabilities ensures that your SecureSphere solution is efficient and reliable, and you are maximizing your investment.

Key Benefits

- **Save time and IT resources:** Imperva's highly-skilled professional services experts provide the quickest and most efficient way to utilize SecureSphere's advanced monitoring and security capabilities.
- **Improved performance and efficiency:** A properly tuned deployment ensures that your system is running at optimal performance without redundancy or duplication of alerts and audit data, and that followed actions are properly managed.
- **Low cost and minimal interruptions:** Remote services are performed by a professional services expert who connects to SecureSphere via a Virtual Private Network or other connections (i.e. WebEx or similar web-conferencing platform). This eliminates travel and expense costs for an on-site resource, and allows your team to continue working with minimal interruptions.
- **Maximize your SecureSphere investment:** Imperva's Remote Health Check program will ensure that advanced monitoring and security capabilities are properly used, and that you are getting the most from your security investment.
