

Imperva SecureSphere for SharePoint

DATASHEET

Security for SharePoint's File, Web and Database Resources

SecureSphere for SharePoint helps organizations protect sensitive data stored within Microsoft SharePoint. It addresses the unique security requirements of SharePoint's file, web and database elements, providing granular visibility into user access to SharePoint files, and delivers protection against web-based threats.

SecureSphere for SharePoint provides multi-layered security that includes a Web Application Firewall to protect against web-based attacks, activity monitoring to safeguard content such as files, folders and lists, and a Database Firewall to prevent unauthorized access to the Microsoft SQL database at the core of SharePoint.

Audit All Data Access Activity

SecureSphere provides continuous monitoring and detailed auditing of all data access activity so organizations have a complete audit trail showing the "Who, What, When, Where, and How" of each data access. This enables security, compliance and SharePoint administrative staff to understand exactly who accessed, moved, changed or deleted data.

Enforce Security Policies in Real-Time

SecureSphere for SharePoint delivers a flexible policy framework that allows business to take action immediately when data access activity deviates from corporate policy. Organizations can respond by generating alerts, or in certain situations, blocking access completely. Your sensitive files are safe with SecureSphere for SharePoint, the only security technology that can stop unwanted access to files stored in SharePoint.

*SecureSphere for
SharePoint provides
multi-layered security.*

SecureSphere for SharePoint Benefits

- Enforce business rules by generating alerts or blocking access to files in SharePoint
- Quickly conduct forensic investigations when suspicious behavior is detected
- Protect against web-based attacks
- Prevent tampering with SharePoint's Microsoft SQL database
- Rapid time-to-security

Protect Against Web-Based Attacks

SharePoint is a web-based system, subject to online attacks such as SQL injection and cross-site scripting. SecureSphere for SharePoint incorporates market-leading SecureSphere Web Application Firewall, which protects SharePoint from current and future web security threats.

Prevent Unauthorized Database Access

SharePoint stores all data - files, lists, and application data - within a Microsoft SQL database. SecureSphere for SharePoint incorporates market-leading SecureSphere Database Firewall to monitor all database access and ensure unauthorized access is prevented.

Imperva SecureSphere Cyber Security

Imperva SecureSphere is a comprehensive, integrated security platform that includes SecureSphere Web, Database and File Security. It scales to meet the data center security demands of even the largest organizations, and is backed by Imperva Application Defense Center, a world-class security research organization that maintains the product's cutting-edge protection against evolving threats.
