14 Questions to Ask Your Application Security Vendor

CHECKLIST

- How many different web attacks do you detect and mitigate?

- Do you offer a single point solution that stops one threat or a platform that solves multiple threats?

- Does a Web Application Firewall (WAF) protect from all the attacks on a website? Is that all I need to start to meet compliance requirements?

- Do you protect APIs?

- Do you stop automated bot threats like credential stuffing, inventory hoarding, scalping, or scraping bots?

- What is your DDoS SLA?

- Are you focused on application security or on application content delivery?

- Do you prevent client side attacks like formjacking?

- Do you prevent supply chain attacks?

- Do you publish regular threat research?

- Do your security products work out-of-the-box and block threats immediately?

- What is the third party validation around the reputation of your products?

- Do customers buy your products for real security or just achieve check-box compliance?

- Do you offer a free trial of all your products?
