

Security Analysts for Web Application Firewall GW

Expertise On-Demand for Imperva On-Premises Application Security

Imperva Security Analyst On-Demand is an annual subscription service that augments your security operations abilities and productivity with access to an experienced Web Application Firewall team that is available 24/7. Our experts are ready to help in improving your security posture, mitigate threats and respond to attacks in real-time. This premium service provides the expertise you need, when you need it, offloading the need to hire, train and retain in-house talent.

Imperva's Web Application Firewall Security Analysts offer product-specific experts to optimize your Imperva's Web Application Firewall (WAF) security settings, reduce cyber threats and respond to an active attack or incident. The service consists of on-demand and as-needed 24/7 assistance from experienced consultants who are able to step in when you need it most.

With WAF Security Analysts, organizations can leverage Imperva's dedicated global team of knowledgeable and experienced web application security professionals and get the most of your Imperva WAF product running On-Premises or on a public cloud (e.g., Amazon AWS, Microsoft Azure).

Attack Readiness

The Security Analyst team members adapt to the security requirements specific to each customer. They are experienced in working with all manner of web infrastructure - no matter how large, diverse, or complex a customer's web environment may be. The Security Analysts team will have web application protection applied quickly, optimizing it to take full advantage of Imperva WAF's new security and performance-enhancing features as they become available with version enhancements or in response to developments such as publicized vulnerabilities.

The Security Analyst will set your Web Application to maximize security by suggesting best practice policies that protect your assets and matching your security regulation requirements with minimal false positive alerts and minimal impact on the availability of your applications.

KEY FEATURES AND BENEFITS

Best-in-class, PCI-certified WAF

Out of the box, automated protection

Deploys in blocking mode with near zero false positives

Backed by security experts at Imperva Research Labs

Imperva is an analyst-recognized, **cybersecurity leader** championing the fight to **secure data and applications** wherever they reside.

Precision Tuning

Our Security Analysts advise on precision-tuning of your WAF to match your unique traffic patterns and application use, delivering optimum website protection while avoiding false positives. Once configured, the WAF is optimized to actively block malicious traffic, technical attacks, and business logic attacks.

Unparalleled Security Expertise

The Security Analysts team works hand-in-hand with the world-renowned Imperva security research team. This cooperation yields the most up-to-date threat intelligence, and the most complete set of application signatures and policies in the industry.

Attack Response

Are you under attack? Let our security experts stop the cyber attack and minimize its impact on your infrastructure. We hire the best talented security experts who are trained to suggest action plans, contain and stop active attacks on your data centers and reduce risk.

Our Security Analysts Service gives your organization access to our incident response experts that operate 24/7 and specializes in analyzing security alerts, learning attackers playbook and investigating security incidents. Leveraging the WAF GW capabilities, they can offer mitigating policies, rate limiting rules, intrusion detection and prevention signatures to detect and monitor the attack sources and block them.

Attack Reporting

The Security Analysts team will leverage the extensive reporting capabilities of the Web Application Firewall to provide customers deep forensic insight. These customized graphical reports enable customers to quickly analyze security threats and meet compliance requirements. Reports can be viewed On-Demand or delivered on a daily, weekly, or monthly basis via FTP or email.

Scheduled Reports

The Security Analysts team schedules reports to summarize weekly security event trends, provide violation details, and other useful information. These reports can be generated in either CSV or PDF format, and delivered via email or accessed directly from the management server's GUI.

CPU Usage for Gateway WAF1
CPU Usage

Total and Applicative Traffic for Gateway WAF1

SSL Handshake/sec for Gateway esc_953351

Break down by Attack Type

System Performance Reports

What is not measured cannot be improved. CPU usage, network throughput and SSL/ TLS key exchanges per second are key performance indicators of your system health. Our experts can perform a system health analysis and generate a report to assure your system runs at optimal performance and help you set system event logs to alert when a health issue is detected.

Unparalleled Security Expertise

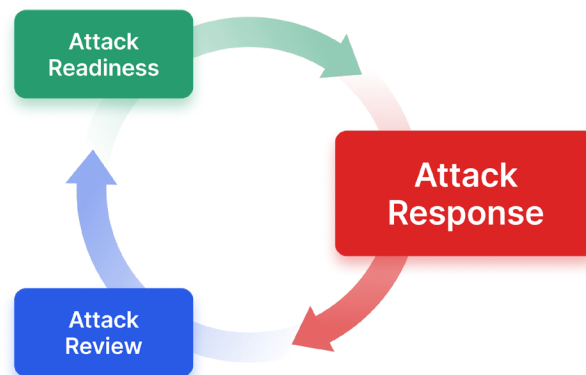

The Security Analysts team works hand-in-hand with the world-renowned Imperva security research team. This cooperation yields the most up-to-date threat intelligence, and the most complete set of application signatures and policies in the industry.

Attack Readiness

- Up to 52 hours of attack prep and walkthrough sessions annually.
- Default to 1x weekly session, cadence can be customized
- Focus on policies applied and tuned, identify configuration or statuses that impact security posture

Attack Review

- Assist with reports and log review to assess impact of incidents
- Bring lessons learned and improvements from attack response into future attack prep sessions

Attack Response

- On-Demand SOC, Immediate, direct access to Imperva experts who will join live sessions with customer staff
- Use deployed Imperva Solutions to identify and mitigate active/ongoing attacks
- Assurance that Imperva will support customers during emergency situations and active security incidents, not just a technology vendor

Imperva is an analyst-recognized, **cybersecurity leader** championing the fight to **secure data and applications** wherever they reside.
