

# Minimize Website Disruption During Essential Maintenance with a Virtual Waiting Room

Remaining online during periods of peak traffic can be challenging in the best of times, but what if an unexpected traffic spike occurs during essential maintenance?

Oftentimes, essential website maintenance requires taking sites offline either partially or entirely, which causes disruption for customers trying to access them.

Imperva Waiting Room keeps organizations' websites online by placing users into a virtual waiting room where they will be presented with an estimated wait time, instead of encountering an unwelcome "site offline" message. Waiting Room allows you to:

- ✓ Set the threshold for how many visitors you can handle during essential maintenance
- ✓ Sort visitors on a first-in/first-out basis
- ✓ Customize the room design to your own brand specifications

Best of all, it's easy to set up, allowing you to focus on maintaining your websites.
